Description :

Rocks Clever Catch (Product Code: SLE/ES/15) is a 24 in inflatable vinyl ball printed with 96 facts about igneous, metamorphic and sedimentary rocks. Designed for grades 6-8, it turns the review of earth materials into a game: students toss the ball around the classroom and respond to the fact under their hand, so revision becomes quick, active and noisy in the best sense. It is a game-based science kit for students, supplied by a school laboratory equipment supplier in India, **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Inflatable learning ball
Size	24 in
Material	Vinyl
Content	96 facts about rocks
Topics covered	Igneous, metamorphic and sedimentary rock types
Grade level	Grades 6-8

Typical Use

The ball works best as a five- or ten-minute starter or plenary. The teacher throws it to a student, who reads the fact under a chosen thumb, says which rock type it relates to, and throws it on. Variations keep the game fresh: teams can score points for correct classifications, students can be asked to turn a fact into a question for the next catcher, or the class can keep a running list of new vocabulary. It can also be bounced on the playground or spun at home for individual revision.

Used before a practical session with real specimens, it refreshes the key terms students need, and it fits well with a class 8 science kit when a rocks and soil unit is being revised. Inflate it until firm but not tight, keep it away from sharp edges and rough surfaces, and wipe the vinyl with a damp cloth after outdoor use.

Supplier

This learning ball is supplied by Jain Scientific Equipments Private Limited, which serves schools under the ScienceLab name from Ambala, Haryana. Purchase departments completing vendor forms can use the company's GST registration (GSTIN 06AAECJ8618A1ZT) and Legal Entity Identifier (LEI 3358004HRD1JIVXKYX49). Further background is on our company profile.
