Product Name :

Water To Air Heat Exchangers

Product Code :

SLE/EA/20

Description :

- Water to Air Heat Exchanger mirrors air heating and water cooling applications.
- An electrically operated valve opens to let water in to fill the tank.
- The air exits the duct through a handoperated slide-valve.
- The tank has protection in case of over temperature, low water level and overfilling.
- A precision needle valve and flow meter control and measure the water flow rate.
- Students use the orifice and valve to measure and control the air flow.
- Thermocouples at the water connectors and in the air duct measure hot and cold inlet and outlet fluid stream temperatures.
- For safety and simplicity, the heat exchangers have selfsealing quick connectors for their water supply.
- The cooling air passes down a vertical duct containing an orifice plate which connects to a differential pressure transducer.
- The air then passes through a fixed speed centrifugal fan and along a horizontal duct containing the heat exchanger.
- It fits on a bench top and includes a hot water supply, a cooling air duct and all instruments needed for tests on cross-flow heat exchangers.
- The heat output of the design produces good results without greatly affecting the temperature of a reasonable size classroom or laboratory.

Contact Science Lab for your Educational School Science Lab Equipments. We are best scientific laboratory equipments manufacturer, scientific laboratory equipments supplier, technical educational equipment exporter, technical educational equipment manufacturer, technical educational equipment supplier, technical educational equipments exporter.
