Description :

Frog Model, Dissectible (Product Code: SLE/EZ/05) is a life-sized, take-apart frog anatomy model used to teach amphibian external and internal structure to students in grades 6 to 12. The8 in high model has 22 removable parts referenced on a key card and comes with reproducible student worksheets and a teacher's guide, so it works as a reusable, dissection-free lesson. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, among its animal models for biology labs.

Specifications

Parameter	Detail
Grade level	Grades 6–12
Scale	Life-sized
Height	8 inch
Removable parts	22, referenced on a key card
Durability	Washable and reusable; will not chip, tear or break
Teaching materials	Reproducible student worksheets, teacher's guide, key card
Includes	Anatomical key and numbered kit inventory
Product code	SLE/EZ/05
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Frog Model, Dissectible Used For?

The frog is the classic vertebrate for teaching organ systems, and this model lets students take one apart and put it back together as often as needed. Working in small groups, learners remove the 22 parts in sequence, match each to the key card, and see how the internal organs sit in relation to one another. Because the model is life-sized, students get a realistic sense of scale before, or instead of, a preserved-specimen dissection.

The reproducible worksheets give each student a record of what they identified, and the teacher's guide helps plan the lesson and check answers. After class, the model can simply be washed and stored. It suits middle and high school biology, and colleges that want a durable, dissection-free alternative among their animal models for the biology lab.

What to Specify When Ordering

- The number of models, for example one per group of students.
- Whether you also need a frog skeleton or anatomy chart for the same unit.
- The delivery address for your school, college or dealership.
