Description :

Digestive System Model 2 part (Product Code: SLE/DS/03) is a life-size model that presentsthe entire human digestive system in graphic relief on a baseboard, from the nose, mouth cavityand pharynx through the esophagus and GI tract, with the liver and gall bladder, spleen andpancreas in place. The duodenum, caecum and rectum are opened to show their interior, and the transverse colon is removable. Manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, an anatomical models manufacturer, it is a core wall or bench model for schools and colleges choosing biology teaching aids in India for the digestion syllabus.

Specifications

Parameter	Detail
Scale	Life size
Format	Graphic relief, mounted on baseboard
Features	Nose, mouth cavity and pharynx, esophagus, GI tract, liver with gall bladder, spleen, pancreas
Opened sections	Duodenum, caecum and rectum
Removable part	Transverse colon
Weight	4.4 kg
Dimensions	81 x 33 x 10 cm

Typical Use

Because the whole tract is laid out in one relief, teachers can follow a meal step by step: chewing in the mouth cavity, swallowing through the pharynx and esophagus, storage and mixing in the stomach, digestion and absorption in the small intestine, and water recovery in the large intestine down to the rectum. The opened duodenum, caecum and rectum let students see inside key sections, while lifting off the transverse colon gives a clearer view of the organs it normally covers.

The flat baseboard format suits permanent display in a biology room or corridor, where it acts as a reference for the whole digestion unit, and it works equally well laid on a bench for small-group revision. At 4.4 kg it is best lifted with both hands by the baseboard, not by the organs.

Manufacturer

The model is a product of **Jain Scientific Equipments Private Limited**, an Ambala, Haryana company that builds educational models and laboratory equipment under the **ScienceLab** name. Read about the company on our profile page.
