Description :

Water pack 0.6L (Product Code: SLE/CCE/017) is a screw-cap plastic water pack used to keep vaccine carriers and cold boxes cold once it has been filled with water and frozen. It has a 0.6litre capacity, a 0.58 litre water content, a marked filling line and reinforced walls that resistswelling, and it is delivered empty. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, for scientific equipment bulk supply to programmes and distributors.

Specifications

Parameter	Detail
Model	Waterpack WP 0.6L
Capacity	0.6 litres
Water content	0.58 litres
Closure	Removable screw cap with internal water seal to prevent leakage
Filling line	Indicated on one side
External dimensions	190 x 120 x 35 mm, ±1 mm
Walls	Reinforced to prevent swelling
Condition on delivery	Supplied empty
Product code	SLE/CCE/017
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the 0.6L Water Pack Used For?

Water packs are the cold source inside passive cold-chain containers. Health staff fill each 0.6L pack with clean water up to the marked line, screw the cap down on its internal seal, and freeze the packs in a water-pack freezer or the freezer section of a combined appliance. The frozen packs are then placed in vaccine carriers and cold boxes to keep vaccines cold during transport and outreach sessions.

The filling line matters: stopping at the 0.58 litre water content leaves room for the water to expand as it freezes, and the reinforced walls help the pack keep its 190 x 120 x 35 mm shape so it still fits the container. Before each use, check that the cap is tight and the pack does not leak, and follow your programme's guidance on conditioning frozen packs before packing vaccines.

What to Specify When Ordering

- Number of packs, allowing for sets in the freezer and sets in use.
- The carriers, cold boxes or freezers the packs must fit, compared with the 190 x 120 x 35 mm size.
- Delivery location, noting the packs are supplied empty.
