Description :

Screw Cap Tube 5.0 ml (Product Code: SLE/CL/42) is a small polypropylene test tube with a screw cap and a capacity of 5.0ml, used in hospital laboratories and reference centres formultiple tests. Its size suits jobs where only a few millilitres need to be held securely, such askeeping separated serum or plasma, storing reagent portions or passing a specimen from onebench to another. This tube is one of the items of disposable lab equipment in India supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Test tube with screw cap
Material	Polypropylene
Capacity	5.0ml
Closure	Screw cap
Used in	Hospital laboratories and reference centres
Purpose	Multiple laboratory tests

Typical Use

A common use is aliquoting: after a blood sample has been centrifuged, the serum or plasma is pipetted into one or more small screw-cap tubes so that different sections of the laboratory can work from their own portion, or so a portion can be kept back for repeat testing. The threaded cap closes more securely than a push-on stopper, which reduces the chance of leaks when tubes are carried in racks or boxes.

Polypropylene is a tough, slightly flexible plastic that resists many aqueous solutions and alcohols, making it practical for general bench work. Write the sample identity on a label before filling, tighten the cap fully and store tubes upright. Laboratories that source from a lab plastic ware supplier in India often keep this size next to larger conical tubes so both aliquoting and centrifugation needs are covered.

Supplier

Jain Scientific Equipments Private Limited supplies this 5.0ml tube under its ScienceLab trading name from Ambala, Haryana, serving hospital, college and research laboratories with small plasticware items. More background is on our profile page.

Related Clinical Laboratory Items

Useful companions when aliquoting and storing small sample volumes:

- Screw Cap Conic Tube — a larger conical tube for the centrifugation step before aliquoting
- Transfer Pipette, 1ml — for moving small volumes of serum or reagent into the tube
