Description :

Handball, Junior (Product Code: SLE/PE/09) is a junior-size synthetic-leather ball used to teach handball skills – passing, catching, dribbling and shooting – to younger pupils in school physical education. With a circumference of 54–56 cm and a weight of 325–375 g, it is sized for smaller hands, and it is delivered deflated together with two non-return inflating needles. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Size	Junior
Circumference	54–56 cm
Ball weight	325–375 g
Outer casing	Synthetic leather
Valve	Non-return valve
Playing surface	Suitable for all types of playgrounds
Supplied	Deflated, with two non-return inflating needles
Intended use	Physical education and recreation
Estimated weight / volume (catalogue figures)	0.410 kg / 2.832 dm^3
Product code	SLE/PE/09
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Junior Handball Used For?

Handball depends on gripping and throwing the ball with one hand, so a ball that fits the player's hand matters more than in most ball games. The junior size lets younger pupils hold it securely for overarm passes and shots, practise bounce passes and two-handed catches, and dribble while moving, before they progress to full team games.

Teachers typically start with passing in pairs and small-sided games with small goals, then add simple rules such as limited steps with the ball. Because the ball suits all types of playgrounds, lessons can run on a hard court or an open school ground. Inflate it with a pump and one of the supplied needles before first use, moistening the needle so the valve is not damaged.

What to Specify When Ordering

- The size you need – this page is the junior ball; a senior-size ball is listed separately.
- The number of balls, for example one per pair of pupils for passing practice.
- Whether you need a pump, since the ball arrives deflated with needles.
