Product Name :

Tube, Suction, L50cm, Sterile, Disposable

Product Code :

SLE/CPG/015

Description :

Tube, Suction, L50cm, Sterile, Disposable (Product Code: SLE/CPG/015) is a single-use PVC suction catheter used to clear secretions, blood or other liquids from the pharynx and airways in wards, emergency rooms and theatres. It is a CH16 tube about 50 cm long, with a conical cup connector for a suction pump and an open distal end with two side windows, sterilised with ethylene oxide gas. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, for hospital buyers who need disposable lab equipment in India.

Specifications

Parameter	Detail
Type	Sterile suction catheter (suction tube), single channel
Diameter	CH16 (Charrière / French gauge)
Length	Approximately 50 cm
Material	Polyvinyl chloride (PVC)
Proximal end	Cup connector with conical tip, for connection to a suction pump system
Distal end	Open, straight, with two side windows
Size identification	Colour code / external diameter visible on the cup connector
Sterility	Sterile; initial sterilisation by ethylene oxide gas
Use	Single-use, disposable
Estimated weight	0.040 kg
Estimated volume	0.090 dm^3
Product code	SLE/CPG/015
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Sterile Suction Tube Used For?

A suction tube removes pus, blood, secretions, food or other liquids that obstruct the pharynx or the airways. It can be passed through the mouth or nose, or through the channel of an endotracheal or tracheotomy tube, while the conical cup connector is attached to the tubing of a suction pump.

CH16 is listed as the most commonly used size, which makes this tube a practical stock item for emergency trolleys, recovery rooms and wards. The colour code on the connector lets staff confirm the size at a glance before opening the pack. Because every tube is single-use, facilities usually order it in quantity as part of a scientific equipment bulk supply.
