Material	Lightweight neoprene garment with Velcro
Metal parts	None
Wear	Lightweight, flexible and comfortable for the wearer
Use	Reusable
Compression segments	Numbered neoprene/elastic segments
Fastening	Fasteners
Documentation	Complete IFU with cleaning/reuse limits
Product code	SLE/DDS/014
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Anti-Shock Garment Used For?

Postpartum haemorrhage can become critical faster than a woman can reach a facility able to treat its cause. The non-pneumatic anti-shock garment is intended for that gap: it is applied to a woman with uncontrollable PPH while she is transferred to comprehensive obstetric care.

Being non-pneumatic, the garment needs no pump or pressure gauge; the neoprene is closed with Velcro. It has no metal parts, and it is reusable. It should be applied and removed only by health workers trained in its use, following the protocol of their facility or maternal-health programme.

What to Specify When Ordering

- Number of garments required
- Size: this listing is the small size – ask us about any other sizes before ordering
