Description :

Syringe, Disposable, 2ml, Sterile (Product Code: SLE/HLI/04) is a sterile, disposable 2 ml syringe with a Luer nozzle used for small-volume injections and for withdrawing small amounts of fluid in clinics, wards and treatment rooms. Its barrel scale reads in fine 0.1 or 0.2 ml intervalswith a graduation line at each 1.0 ml, which makes part-millilitre doses easy to measure, and it is available as a two-piece or three-piece syringe. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Disposable syringe, sterile
Capacity	2 ml
Nozzle	Luer
Construction	Two-piece (barrel with Luer nozzle, piston/plunger) or three-piece (barrel with Luer nozzle, stopper, piston/plunger)
Scale	Graduated scale on the barrel, easy to read
Scale intervals	0.1 or 0.2 ml
Graduation lines	At every 1.0 ml volume increment
Intended use	To inject fluids into, or withdraw fluids from, the body
Product code	SLE/HLI/04
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the 2 ml Syringe Used For?

Small syringes exist because accuracy depends on scale: a dose of a fraction of a millilitre is far easier to measure on a 2 ml barrel marked every 0.1 ml than on a larger syringe with coarser markings. The 2 ml size is therefore used for small-volume injections and for drawing off small quantities of fluid.

As a rule, pick the smallest syringe that holds the whole dose, draw up, tap out air bubbles and set the plunger stopper exactly on the required line before giving the injection. Teaching and research labs buying disposable lab equipment in India also use 2 ml syringes to dispense small liquid volumes during practical work.

What to Specify When Ordering

- Construction: two-piece or three-piece
- Scale interval: 0.1 or 0.2 ml
- Quantity, plus any needles to be quoted with the syringes
- Delivery destination
