Product Name :

MUAC, Adult, Without Color Code

Product Code :

SLE/AE/06

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

A plain, numerically graduated tape for measuring an adult's mid-upper arm circumference (MUAC) up to 50 cm. It carries no colour bands: it gives the actual reading in 1 mm divisions, which the user compares with their own protocol. The tape is non-tear, stretch-resistant plasticised synthetic paper with permanent print that stays readable in low light.

Adult MUAC tape specifications

Parameter	Detail
Type	MUAC measuring tape for adults, without colour code
Range	Up to 50 cm
Graduation	1 mm
Accuracy	±1 mm of the maximum measurement (50 cm)
Operating temperature	0°C to +40°C
Material	Non-tear, stretch-resistant plasticised synthetic paper
Thickness	Minimum 0.3 mm
Print	Permanent, resistant to solvents, easily readable in low light
Product code	SLE/AE/06
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Supplied by	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Measuring adult arm circumference with the plain tape

Marking and reading. The person stands with the elbow bent at a right angle. The measurer finds the tip of the shoulder and the tip of the elbow, measures between them and marks the halfway point on the skin. With the arm hanging loose again, the tape goes round at the mark and the reading is taken to the nearest millimetre.

Part of a full adult assessment. Record the arm reading with body weight from the adult physician scale and standing height from the baby, child and adult length/height board. Writing all three on one form at the same visit keeps the assessment complete.

Observer practice in class. In a nursing or dietetics session, pairs measure the same volunteers twice each and compare results. The class looks at how far repeat readings drift and why: a misplaced mark, a loose or tight tape, or a sleeve left on. Trainers who also teach child screening can show the colour-banded child MUAC tape
