Description :

The Portable Baby/Chd/adult L-H is one folding board for the whole household. Babies up to 24 months lie on it for recumbent length, from a minimum of 0 cm, while older children and adults stand against it for height. Fitted with two extensions itreads 0–204 cm; with one, 0–142 cm. The scale is divided in 0.1 cm steps.

Baby, child and adult measuring board specifications

Parameter	Detail
Measures	Recumbent length of babies up to 24 months (minimum length 0 cm); standing height of children from 24 months and adults
Range with two extensions	0–204 cm
Range with one extension	0–142 cm
Graduation and accuracy	Centimetres, smallest graduation 0.1 cm; accuracy ±0.2 cm, precision ±0.2 cm
Scale and width	Integrated, hard-wearing scale with numerals along the board, readable in low light; board about 25 cm wide
Measuring slide	Glides smoothly; lockable or friction-held; wobble of about 0.2 cm at most over the full length; reading point marked by arrow or pictogram
Folding and carrying	Folds up; panels held by self-contained spring-loaded bolts; handle at the point of balance and/or removable shoulder or back strap
Set-up	No tools needed; no calibration needed, as all parts have fixed positions
Construction	Light, strong material with a smooth finish for cleaning; resists high humidity and heat; water splash proof and shock resistant
Product code	SLE/AE/011
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Supplied by	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Measuring tasks with the full-range length-height board

Household survey round. Measure each family member in turn: babies lying with the board flat, everyone else standing barefoot with it upright. Weigh the same people on a mother and child scale and take arm circumference with an adult MUAC tape, so one visit gives a complete record for the family.
