Description :

Duplay Uterine Forceps Curved (Product Code: SLE/SI/20) is a long, double-curved uterine traction forceps of the vulsellum or tenaculum type, used for gripping and immobilising thicktissue in gynaecological procedures. At 28 cm it gives extra reach, and its hard, lockable ratchetkeeps the grip closed while traction is applied. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, and appears in its lab equipment catalogue for India andexport customers.

Specifications

Parameter	Detail
Material	Martensitic steel (quenched, magnetic)
Composition	0.20% carbon; 13% chromium
Type	Uterine traction forceps (vulsellum / tenaculum); gripping forceps
Shape	Double curved
Lock	Hard ratchet, lockable
Length	28 cm
Intended use	Gripping and immobilisation of thick tissue
Product code	SLE/SI/20
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Duplay Uterine Forceps Used For?

Like other tenaculum forceps, the Duplay grasps the cervix so the operator can draw the uterus into line and hold it steady for instruments passed through the cervical canal. Its double curve bends the shaft away from the axis of the vagina, so the handles sit clear of the speculum and the operator's view, which is especially useful with its 28 cm length.

Apply traction smoothly rather than in jerks, and release the ratchet completely before removing the forceps. Wipe the jaws and ratchet clean after every procedure and check that the lock still engages positively. A lab equipment distributor in India equipping district hospitals or midwifery schools can bundle the Duplay with specula, sounds and curettes.

Supplier

Jain Scientific Equipments Private Limited, whose trade name is ScienceLab, supplies the Duplay Uterine Forceps Curved from Ambala, Haryana, to hospitals, maternity units, teaching institutions, dealers and importers. Where a buyer is choosing between traction forceps patterns, one quotation can include several for comparison.
