What Is the Cheron Forceps Used For?

Before a gynaecological procedure the vagina is prepared by swabbing. The Cheron forceps holds the swab at the end of its 25 cm arms, locked in the ratchet so it cannot slip, and the long reach keeps the user's hand well back from the patient during preparation.

Between procedures the same forceps can stand in a forceps jar as a serving forceps, used to pick up and pass dressings or instruments from a tray. Midwifery and nursing schools that buy scientific & laboratory instruments for practical training can include it in their gynaecology instrument sets. Release the ratchet before cleaning so the jaws and joint can be reached easily.
