**Product Name :**

Gas Laws Poster

**Product Code :**

SLE/CH/168

## Description :

Discover the laws of the giants of chemistry.

Graphic illustrations show how gases behave in different environments.

Students can observe how Boyle's Law, Avogadro's Law and Charles' Law combine to form the Ideal Gas Law.

They'll also learn the importance of Dalton's Law of the partial pressures of gases.

Your younger students will become acquainted with these core contributors to chemistry and physics, while more advanced students will determine how each law contributes to the overall understanding of gas behaviour.
