Description :

Spatula, Polypropylene (Product Code: SLE/P/44) is a blue, 150 mm double-ended plastic tool used to scoop, transfer and level solid chemicals and powders in school and college laboratories. One end is a spoon and the other a flat, knife-edged face, and the spatulas come in packs of 20 for whole-class use. This basic item of chemistry lab equipment for schools is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Material	Polypropylene
Colour	Blue
Design	Spoon at one end; flat, knife-edged face at the other
Length	150 mm
Chemical resistance	Chemical resistant
Pack size	20 spatulas
Product code	SLE/P/44
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is a Polypropylene Spatula Used For?

Students use the spoon end to take powders or crystals from a reagent bottle and the flat blade to scrape, level or divide solids on a weighing boat or watch glass. A plastic spatula is handy where a metal blade could react with the sample or scratch a container.

Use a clean, dry spatula for each chemical to avoid cross-contamination, wipe it after use and wash it before it goes back in the drawer. As practical-class lab plastic ware, a pack of 20 lets several benches keep their own spatula. Avoid very hot solids, which can soften plastic.

What to Specify When Ordering

- The number of packs (20 spatulas per pack).
- Other weighing items to include, such as weighing boats or weighing paper.
- The delivery location in India or abroad.

OEM Manufacturer

ScienceLab, the brand of Jain Scientific Equipments Private Limited, is the OEM manufacturer of this polypropylene spatula and makes it at the company's own licensed factory at Saha, Ambala, Haryana, India. Schools and distributors buy direct from the factory rather than from a trading intern — ask u
