Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a 30 ml Universal Container Used For?

Universal containers are an everyday sample pot in many laboratories: they receive a sample, stay sealed on the way to the bench and hold it until testing. Because this one is supplied sterile (EO), it can be opened and filled directly for work that calls for a sterile container, such as microbiology practicals.

Open the cap only when you are ready to fill, avoid touching the inside of the cap or rim, then screw it down firmly and label the container. Store it upright and follow your institution's procedures for handling and disposing of specimens.

What to Specify When Ordering

- How many sterile containers you need.
- Confirmation that the sterile 30 ml size is right, or whether a larger container such as the Specimen Container, PP suits your samples.
- The delivery location in India or abroad.

Supplier

Jain Scientific Equipments Private Limited, trading as ScienceLab, supplies this universal container to laboratories from Ambala, Haryana, India. It is one of several sample containers the comp
