Description :

Wicks For Glass Spirit Burner (Product Code: SLE/CH/238) are replacement wicks that can be used with the Methylated Spirit Burner, packed ten to a pack so that a laboratory can keep every burner on the bench lighting cleanly through the school year. A fresh wick draws fuel evenly and gives a steady, clean flame, while a charred or shortened one produces a weak, smoky flame that slows down practical work. The wicks are manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as part of its range as a chemistry consumables supplier in India and for institutions abroad.

Key Details

Parameter	Detail
Type	Replacement burner wicks
For use with	Methylated Spirit Burner (glass spirit burner)
Supplied as	Pack of 10
Suitable for	School, college and teaching laboratories that use spirit burners for flame heating

Typical Use

Spirit burners are the heat source of choice in rooms without a gas supply, in primary and middle-school science, and wherever a small, gentle flame is enough — warming a test tube, heating a small beaker on a tripod or running a simple heat-transfer demonstration. Over time the exposed end of the wick chars and shortens, and it eventually stops drawing fuel properly. Replacing it takes a minute: remove the cap and the wick holder, thread a new wick through the holder so that a short, even length stands above it, let the lower end soak in methylated spirit before lighting, and trim any frayed strands.

Only refill or re-wick a burner when the flame is out and the glass has cooled, keep the cap on when the burner is not in use to stop the fuel evaporating, and never let a wick burn dry. Keeping a pack of spare wicks with the lab consumables means a burner can be returned to service in the same lesson instead of being set aside.

Manufacturer

These wicks are manufactured by **Jain Scientific Equipments Private Limited**, the company behind ScienceLab in Ambala, Haryana. The company keeps spares and consumables alongside its laboratory apparatus, so burners, lamps and other bench equipment can stay in service between larger orders. More information is on our company profile.

Related Chemistry Lab Equipment

Items used with a spirit burner in the same heating setup:

- Methylated Spirit — the fuel the wick draws up to the flame
- Glass Spirit Lamp — a glass-bodied spirit lamp; ask us to confirm wick fit before ordering
