Description :

Window Thermometer, Large (Product Code: SLE/CH/239) is a clear, flexible and virtually transparent thermometer, 80mm in diameter, that fixes to a window or glass door so the temperature on the other side of the glass can be read from inside the room. A centre suction attachment and electro-static technology hold it firmly in place, and its range of -50°C to 50°C covers everyday outdoor conditions. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, and is a simple, visual piece of educational laboratory equipment in India for classrooms and school weather projects.

Specifications

Parameter	Detail
Type	Clear, flexible, virtually transparent window thermometer
Fixing	Centre suction attachment; adheres to windows or glass doors using electro-static technology
Range	-50°C to 50°C
Diameter	80mm
Stand-off from glass	Stands up to 20mm from the window
Design feature	Allows air to circulate around the thermometer to stop exaggerated readings caused by heat radiation through the glass

Typical Use

Fixed to the outer face of a classroom window, the thermometer lets students take the outdoor temperature at the start of every lesson without leaving the room, building a daily weather log for geography, environmental studies or a science club. Placed beside an indoor thermometer, it makes the difference between inside and outside conditions obvious, which leads naturally into discussions of insulation, heat loss through glass and seasonal change. Its transparent body keeps the view through the window largely clear, so it can stay in place all year.

Because it stands up to 20mm off the glass, air moves around the thermometer and it is not simply reading the warmth of the pane itself. Choose a window that is shaded for most of the day and away from air-conditioner outlets or heater vents, and clean the glass before fixing for a secure hold. As a simple window-mounted instrument it pairs well with digital loggers when students compare instrument types.

Manufacturer

ScienceLab products such as this window thermometer are made by **Jain Scientific Equipments Private Limited** of Ambala, Haryana, which supplies schools, colleges and teaching laboratories under the ScienceLab trading name. The company profile gives an overview of the company.
