Product Name :

Electrode Foil Holders

Product Code :

SLE/PHY/163

Description :

Electrode Foil Holders (Product Code: SLE/PHY/163) are plastic strips with 4 mm socket terminals and two crocodile clips, used to hold electrode foils in place and connect them into a circuit during electricity and electrochemistry practicals. Listed as "Foils, Pack of 5", they let students set up simple cells, electrolysis and electroplating experiments with the foils held steady and wired through standard 4 mm leads. They are made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Listed as	Foils, pack of 5
Construction	Plastic strip
Terminals	4 mm socket terminals
Clips	Two crocodile clips
Function	Holds electrode rods and foils in place during use
Product code	SLE/PHY/163
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Are Electrode Foil Holders Used For?

Thin metal foils are awkward to keep upright in a solution and even harder to connect reliably. The holder solves both problems: its crocodile clips grip the foils, and the 4 mm socket terminals take ordinary laboratory leads to a meter or power supply. Typical experiments include building simple cells from two different metal foils, ranking metals in an electrochemical series by the voltage they produce, electroplating copper onto another foil, and electrolysis of salt solutions.

For consistent readings, clean the foils before each run and keep the crocodile clips above the liquid so they do not corrode or take part in the reaction. Rinse and dry the holders after practicals and store them with the foils. They are a small but useful part of any electricity experiment kit for school labs in India and abroad.

What to Specify When Ordering

- Number of packs — the item is listed as foils, pack of 5; confirm the pack contents in your quotation.
- Whether you also need the Electrode Rod Holders version for carbon or metal rods.
- Metal foils or strips and 4 mm leads to use with the holders.
