Description :

Double Trolley with Deep Trays (Product Code: SLE/HF/30) is a double width mobile storage trolley that carries a full set of deep trays on runners, so complete class sets of practical equipment can be wheeled from the preparation room to the classroom and back again. Deep trays take taller and bulkier items — beakers, power supplies, models or boxed kits — that would not sit in a shallow tray. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as practical school laboratory furniture for science teachers, lab technicians and facilities teams.

Specifications

Parameter	Detail
Type	Double width storage trolley
Trays supplied	8 deep trays
Runners supplied	8 pairs
Castors	Larger castors with brakes, for added stability
Storage space	25% more than ScienceLab standard trolleys
Intended use	Transporting class science equipment between classroom and prep room

Typical Use

Technicians typically load each deep tray with the apparatus for one practical or one student group, label the tray front, and slide it onto its runners. When the lesson starts the whole trolley is wheeled to the classroom; afterwards the trays go back in and the trolley returns to the prep room for checking and restocking. With eight deep trays, one trolley can hold the kit for several practicals planned across a school day. Apply the castor brakes whenever the trolley is parked beside a bench so it cannot roll while trays are being pulled out.

In a new school lab setup, a double width trolley like this cuts down repeated trips along corridors and keeps equipment off the benches when it is not in use. Put the heaviest items in the lowest trays to keep the load stable, and avoid overfilling trays so they slide freely on their runners.

Manufacturer

ScienceLab is the trading name of Jain Scientific Equipments Private Limited, an Ambala, Haryana company that makes storage trolleys, frames and laboratory furniture alongside its science teaching equipment. Background on the business is in our company profile.
