Description :

Treble Antimicrobial Trolley with Shallow and Deep Trays (Product Code: SLE/HF/57) combines 16 Shallow Trays and 4 Deep Trays in one silver treble trolley treated with an antibacterial additive. The mixed tray set means small items and bulky items can live in the same unit, each in a tray of the right depth. The product specification lists this treatment as an antimicrobial finish on the trolley surfaces; routine cleaning should still continue. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, for schools, clinics and first aid rooms, and fits well into a complete lab setup for a school in India.

Specifications

Parameter	Detail
Type	Treble antimicrobial trolley
Trays included	16 Shallow Trays and 4 Deep Trays
Treatment	Antibacterial additive
Colour	Silver
Applications	General school storage; hygienic storage of medical, school or first aid equipment

Typical Use

The mix of four deep trays and sixteen shallow ones matches the way most stores actually look: a few bulky lines and many small ones. In a school sick bay, the deep trays can hold ice packs, blankets or bulk dressing packs while the shallow trays sort plasters, sterile wipes, thermometer covers and forms. In a science department, deep trays take boxed apparatus and the shallow trays hold small parts such as cork stoppers, connecting leads or slides, all visible at a glance.

Put the deep trays at the bottom where heavier contents keep the trolley stable, and use the shallow trays above for frequently picked items. Label every tray; with twenty trays in one unit, labels save time. Continue normal cleaning with a suitable product.

Manufacturer

ScienceLab is the trading name of **Jain Scientific Equipments Private Limited**, a manufacturer in Ambala, Haryana. Our company profile has further background.
