Dimensions	300 × 200 × 5 mm
Matching signs	Arrow left and arrow right versions listed separately
Product code	SLE/HE/12
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Covid Testing Arrow Sign Used For?

When a facility sets up a separate testing area, people arriving for a test need to find it without walking through wards or crowded waiting rooms. A clear route of signs does that job: an "ahead" arrow reassures people that they are going the right way along a corridor or path, while left and right arrows mark each turn. Using the same design from the entrance to the testing point keeps the route easy to follow.

Signs are usually placed at decision points such as entrances, corridor junctions and the start of long walkways, where they can be seen before people reach the turn. Measuring 300 × 200 × 5 mm, this sign can be repeated at intervals along a route without dominating a corridor. Facilities running outdoor testing can use the same sequence along a pedestrian path.

What to Specify When Ordering

- How many ahead, left and right arrow signs your route needs.
- Where the signs will be fixed (wall, door, post or stand), so we can advise on fixing.
- The number of sites to be equipped, if you are ordering for several facilities.

Supplier

ScienceLab is the trading name of Jain Scientific Equipments Private Limited in Ambala, Haryana. The company supplies this testing-area sign, together with the matching arrow signs and screening items, to hospitals, clinics and health programmes. Material and fixing details for the batch are confirmed on each quotation. See our profile page for more about the company.
