Product Name :

Human Placenta Model

Product Code :

SLE/BL/79

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

The **Human Placenta Model** (Product Code: SLE/BL/79) shows the structure of the placenta and the relationship between the placenta and the umbilical cord, with 7 positions displayed for identification. It is made of advanced PVC and mounted on a stand. Midwifery and obstetric nursing programmes, medical colleges and senior school biology classes use it to explain how a developing baby is nourished during pregnancy. The model is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a biology lab equipment supplier in India forschools and higher education.

Specifications

Parameter	Detail
Type	Placenta and umbilical cord model
Shows	Structure of the placenta and its relation to the umbilical cord
Positions displayed	7
Material	Advanced PVC
Mounting	Mounted on stand

Typical Use

The placenta is the organ through which the fetus receives oxygen and nutrients and passes waste back to the mother's blood, and the umbilical cord is the connection that carries that exchange. This model lets tutors show both in one piece: students see the overall structure of the placenta, then follow how the cord joins it. Working through the 7 displayed positions gives a clear order for the explanation and a ready-made set of labelling questions for tests and practical records.

In midwifery training it supports teaching on the delivery of the placenta and its examination after birth, while in school biology it answers the common question of how a baby "breathes" and "eats" before it is born. Institutions building a human biology model set often pair it with fetal development models to show the placenta in context. Wipe the PVC with a soft damp cloth and keep the model on its stand when stored.

Manufacturer

Jain Scientific Equipments Private Limited makes the Human Placenta Model at Ambala in Haryana and sells it under the ScienceLab name, together with its range of reproductive and developmental anatomy models. For more about us, see the company profile.
