Product Name :

Human Skull Model, Life Size Colored

Product Code :

SLE/BL/82

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

A life-size skull with each bone painted in its own colour, so students can see where one cranial or facial bone ends and the next begins. It comes apart into 3 parts: a class studies the outer bone boundaries first and then opens the skull to look at its inner surface. Biology and anatomy teachers use it to introduce bone identification.

Colour-coded skull model details

Parameter	Detail
Size	Life-size
Colour coding	Bones painted in different colours
Parts	Disassembles into 3 parts
Purpose	Study and identification of the individual skull bones
Product code	SLE/BL/82
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Manufacturer	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Skull lessons with the colour-coded model

Cranial bones and sutures. Students name the frontal, parietal, temporal and occipital bones by colour, then trace the coronal, sagittal and lambdoid sutures where two colours meet. The same task is repeated on a plain plastic skull, where only the suture lines show the boundaries.

Facial bones, left and right. With the face towards the class, students point out the maxillae, zygomatic and nasal bones and the mandible, and say whether each bone is single or paired. The hidden ethmoid is easier to grasp with a loose ethmoid bone in hand or on a skull bones model that comes apart into many sections.

Skull and brain. Open the model into its 3 parts and show the inner surface that encloses the brain. Then place a brain model in head beside it so students connect each skull region with the brain lobe it covers.

Paper-tag quiz. Set numbered paper tags beside chosen bones, not stuck onto the paint, and ask students to write the bone names on an answer sheet. A partner checks the answers, and all tags are removed before the next group arrives.
