Model	Fetal (child) skull
Material	PVC plastic
Size	10 x 8 x 10 cm
Detail	Major structure of the different skull bones
Mandible	Spring-hinged; opens to view the bone structures of the mouth
Appearance	Lifelike
Product code	SLE/BL/84
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is a Fetal Skull Model Used For?

A fetal skull looks very different from an adult one: the bones of the vault are still separate plates, and the face is small compared with the cranium. Teachers use this model beside an adult skull to explain skull growth, the role of sutures and fontanelles during birth, and how the jaw develops.

In nursing and midwifery training it supports lessons on the fetal head during delivery, and in school biology it works as a teaching aid for human development. Open the spring-hinged mandible gently to show the mouth region, and wipe the PVC surface with a damp cloth after handling.

OEM Manufacturer

ScienceLab, the trade name of Jain Scientific Equipments Private Limited, is the OEM and anatomical models maker that produces this fetal skull model at its own licensed factory at Saha, Ambala, Haryana, India. Nursing schools, medical colleges, schools, dealers and importers can buy it factory-direct and ask the manufacturer about repeat orders or matching anatomy models. The ScienceLab profile has more about the company.
