Description :

Lamela 1 (Product Code: SCL307/054) is a square borosilicate glass cover slip, 20 mm x 20 mm, laid over a specimen on a microscope slide to flatten it for clear viewing in biology and microbiology laboratories. It keeps solid specimens pressed flat and shapes liquid samples into a flat layer of even thickness, so the image stays sharp across the field of view. Lamela 1 is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Microscope slide cover slip
Size	20 mm x 20 mm
Material	Borosilicate glass
Shape	Square
Colour	Clear
Function	Keeps solid specimens pressed flat; shapes liquid samples into an even layer
Application	Laboratory microscopy
Product code	SCL307/054
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Lamela 1 Cover Slip Used For?

Without a cover slip, a wet mount forms a dome of liquid that distorts the image and can touch the objective lens. Lamela 1 flattens that drop into a thin, even film, so a yeast suspension, pond-water sample or stained bacterial preparation can be brought into focus from edge to edge. It also slows evaporation, giving students longer to find and sketch what they are looking for in microbiology lab equipment practicals.

The 20 mm square sits comfortably within the width of common slides, including the Lama 1 and Lama slide listings, and two can be placed along one slide to compare two samples side by side. Keep the slips in their pack until needed, lift them with fine forceps, and discard chipped pieces into a glass-waste container.

Supplier

Lamela 1 cover slips are supplied by Jain Scientific Equipments Private Limited, trading as ScienceLab from Ambala, Haryana, which sources microscopy consumables for schools, colleges and institutional buyers. For vendor registration, the supplying company's details are IEC AAECJ8618A (DGFT) and GSTIN 06AAECJ8618A1ZT. Read more about the company on our profile page.
