What Is the Lab Stand Used For?

The stand is the backbone of many bench setups. With the rod upright in the base, the rings are fixed at the height needed to carry a funnel, a wire gauze or an evaporating basin, while the clamps grip a burette for titration, a test tube held over a flame, or a flask during distillation and gas-collection experiments.

Keep heavy glassware low and centred over the base so the retort stand stays stable, and tighten each clamp only enough to hold the glass without strain. The powder-coated and chrome-plated finishes wipe clean after routine bench spills, and a stand per student group keeps practicals moving.

What to Specify When Ordering

- The number of complete sets (base, rod, rings and clamps) required.
- Whether you need extra rings or clamps beyond the two rings and medium clamps listed.
- The glassware you plan to hold, so clamp sizes can be matched.
- Any boss heads, burettes or gauzes to be quoted on the same enquiry.
