What Is Ascorbic Acid Used For in the Lab?

A classic school practical is the vitamin C test: ascorbic acid decolourises DCPIP or iodine solution, and students compare how much fruit juice is needed to produce the same change as a standard solution. Because it is a reducing agent, ascorbic acid also appears in iodine redox titrations with starch indicator and in demonstrations of how antioxidants slow the browning of cut fruit.

Weigh portions with a clean, dry spatula, make solutions up on the day of use because vitamin C oxidises in air and light, and keep the container tightly closed in a cool, dry, dark place. Schools buying from a chemistry consumables supplier in India often order it with iodine solution and starch for the same practical.
