Description :

Ethanol 96 ° (Product Code: SCL354/077) is an analytical reagent grade ethyl alcohol, with its strength marked as 96°, used as a solvent and extraction medium in school and collegechemistry and biology laboratories. It is supplied in a 500 ml bottle with an MSDS, and its labelshows the molar mass, quantity and danger signs. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as part of its lab chemicals range.

Specifications

Parameter	Detail
Chemical	Ethanol (ethyl alcohol)
Strength marking	96°
Grade	Analytical reagent
Pack size	500 ml
Label information	Molar mass, quantity and danger signs
Documentation	Supplied with MSDS
Shelf life	Shelf life depends on the chemical, its grade and storage conditions; ask us for the expiry date of the batch you are quoted.
Product code	SCL354/077
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is Ethanol 96° Used For?

Ethanol is the everyday organic solvent of the teaching lab. Students use it to extract chlorophyll from ground leaves before paper chromatography, to compare how substances dissolve in water and in alcohol, to precipitate DNA in simple extraction practicals and, with ethanoic acid, to prepare an ester. Diluted with water, it is also used to wipe down benches and instruments.

Ethanol is highly flammable, so keep the bottle closed and away from flames, heaters and sparks, pour out only the volume needed, and warm it in a water bath rather than over an open flame. The danger signs on the label and the MSDS give storage and first-aid details for both chemistry and biology lab setups in schools.

Supplier

Jain Scientific Equipments Private Limited, known by its trading name ScienceLab, supplies Ethanol 96 ° from Ambala, Haryana, to schools, colleges and laboratories. Because ethanol is a flammable liquid, tell us the delivery location early so that the shipping method can be confirmed with your quotation. Read about the company on the ScienceLab company profile.
