Description :

Paraffin (Product Code: SCL372/086) is a solid paraffin wax used for melting and cooling demonstrations, candle making, sealing and waterproofing in school science labs, workshops and craft rooms. It comes as a 200 g pack of wax that melts at about 143 degrees, as stated in the product listing. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, a lab consumables supplier in India.

Specifications

Parameter	Detail
Capacity (pack size)	200 g
Material	Paraffin wax
Melting point (as listed)	About 143 degrees – the listing does not name the temperature scale, so ask us to confirm
Listed uses	Crafts, candle making, canning, bottling, waterproofing
Household uses	Lubricating nails, screws, doors and hinges
Product code	SCL372/086
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is Paraffin Wax Used For?

In the science lab, paraffin wax is a clean, predictable material for showing a change of state: students warm a sample in a water bath, note the temperature as it softens and melts, then plot a cooling curve as it solidifies again. The same wax makes simple candles for combustion experiments, and physics teachers use small blobs of it to fix pins or beads to metal rods in heat-conduction demonstrations.

Beyond experiments, the listing notes its use in crafts, candle making, canning, bottling and waterproofing, and around the workshop for lubricating nails, screws, doors and hinges so they move or drive in smoothly. Melt the wax gently over a water bath rather than a naked flame, because overheated wax can ignite, and never leave melting wax unattended. Let spills cool and harden before scraping them off the bench.

What to Specify When Ordering

- Number of 200 g packs required.
- Whether your work needs a confirmed melting range (ask us to confirm the listed value and its scale).
- Main use – lab experiments, candle making or sealing – so we can point you to matching apparatus.
- Delivery location, within India or for export.
