Description :

Volvox, Whole Body (Product Code: SCL425/0112) is a prepared microscope slide used toshow the colonial green alga Volvox as a complete, intact specimen in biology and microbiology practicals. Students and teachers use it to study how many cells work together within one spherical colony, with the specimen coloured on a borosilicate glass slide. One of the classic biology teaching aids, the Volvox slide is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a laboratory equipment supplier in India.

Specifications

Parameter	Detail
Organism	Volvox (colonial green alga)
Mount	Whole body
Slide	Borosilicate glass, coloured specimen
Box material	Plastic
Box colour and shape	White, rectangular
Listed dimensions	25.4 mm x 76.2 mm (1 x 3 in)
Intended use	Laboratory
Product code	SCL425/0112
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Volvox Slide Used For?

Volvox is often used to introduce colonial organisation — a step between single-celled and many-celled life. In a whole mount, students typically look for the hollow spherical colony, the many small cells forming its wall and, in some colonies, daughter colonies developing inside. The colouring helps these cells show up clearly against the glass.

Because Volvox colonies are large for algae, the slide works well even at low magnification, making it a friendly first specimen for younger learners. Add it to a microscope slides set for school biology and pair it with Spirogyra and protozoa slides to discuss different forms of freshwater life in one practical.

Supplier

The Volvox, Whole Body slide is sourced and supplied by Jain Scientific Equipments Private Limited, which trades under the ScienceLab name from Ambala, Haryana. Alongside slides, the company supplies microscopes and other biology teaching items, so a school can place a single enquiry for an entire microscopy lesson. See the ScienceLab company profile for background.
