Description :

Construction of the Heart (Product Code: SCL235/0138) is a magnified PVC model of the human heart used to teach its chambers, valves and blood flow in biology and anatomy classrooms. Enlarged 3-4 times and separating into 3 parts, it lets students open the heart and look inside rather than study only its outer surface. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Subject	Human heart
Magnification	3-4 times
Parts	3 disassembled (removable) parts
Construction	3-dimensional PVC moulding
Colouring	Non-toxic dye
Product code	SCL235/0138
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Heart Structure Model Used For?

The heart is a double pump, and the idea of two separate circulations only clicks once students can see the four chambers and the valves between them. By lifting away the removable parts of this heart model, anatomy teachers can open it up and use it to explain how blood moves from the veins into the atria, through the ventricles and out along the great arteries.

It is used for the circulatory-system chapter in secondary biology, in nursing and paramedical foundation courses, and for health-education talks. Follow the demonstration by asking students to reassemble the model and describe the route of a single red blood cell through the heart.

OEM Manufacturer

Construction of the Heart is an original product of ScienceLab, the trade name of Jain Scientific Equipments Private Limited. The company is the OEM and makes it at its own licensed factory at Saha, Ambala, Haryana, India, then supplies it factory-direct to schools, colleges, training institutes, dealers and importers. More on the company is on the ScienceLab profile.

Since the maker handles every order, a lost or damaged part can be discussed directly with us, and additional units for new classrooms come from the same production source.
