Hand lamp	Tough outdoor headlamp using 4 x HP2 (D) size batteries
Switch	On-off switch set into the rubber coat
Dimensions (as listed)	210 mm
Lens diameter	70 mm
Product code	SCI-1325/011
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Torch Used For?

Teachers use a torch as a simple light source in lessons on light: casting shadows to show that light travels in straight lines, bouncing a beam off a plane mirror to show reflection, or lighting a model globe to explain day and night. On biology and geography field trips it helps students observe insects, check under stones and move safely at dusk. In the laboratory it is handy for looking into cupboards, behind equipment and inside apparatus, and it serves as backup lighting during a power cut.

The rubber covering gives a secure grip, and the switch sits in the rubber coat so it is easy to find in the dark. Keep spare HP2 cells in the lab store, and take the batteries out if the torch will not be used for a long period so that leaking cells do not damage the contacts.

What to Specify When Ordering

- Which version you want: the hand torch (2 x HP2 batteries) or the outdoor hand lamp (4 x HP2 D size batteries).
- The quantity for each lab, department or field kit.
- Whether batteries should be included in the quotation, as the listing does not say they are supplied.
