Description :

Rubber Bands (Good Quality) (Product Code: SCL-649/073) are general-purpose elastic bands made of rubber, kept on the chemistry bench for the many small fastening jobs of a practical session: holding a paper or cloth cover over a beaker, keeping a balloon seated on the neck of a flask, or bundling glass rods and tubes for storage. The bands have good elasticity and a durable build, so they stretch over vessel rims and spring back instead of snapping after a few uses. Lab assistants and teachers usually add them to a chemistry consumables order alongside labels and filter paper. They are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Key Details

Parameter	Detail
Product Code	SCL-649/073
Material	Rubber
Elasticity	Good elasticity
Build	Durable
Type	General-purpose elastic bands (laboratory consumable)
Purpose	Fastening covers, balloons, labels and bundles during lab work
Suitable for	School, college and institutional laboratories

Typical Use

A rubber band is the quickest way to keep a loose cover firmly on a vessel. Stretch one around a square of filter paper or muslin laid over a beaker to keep dust out of a solution left to crystallise overnight, or loop it round the neck of a flask so that a balloon stays in place while a gas-producing reaction inflates it. Bands also group glass rods, droppers or test tubes into ready sets for each student bench, and keep instruction cards or label strips attached to trays and bottles during a busy practical.

Keep rubber away from open flames, hot plates and freshly heated glassware, because heat softens it and makes it snap. Strong oxidising acids and many organic solvents also attack rubber, so a band should hold a cover in place but never be relied on to seal such liquids. Store spare bands in a closed box out of direct sunlight to preserve their stretch, and throw away any that turn sticky or brittle. As a lab consumables supplier in India, ScienceLab can pack them together with the other small items a practical room reorders each term.

Supplier

Jain Scientific Equipments Private Limited trades as ScienceLab and is based in Ambala, Haryana. The company supplies everyday consumables such as these rubber bands, so institutions can source a complete practical set-up from one vendor. Learn more on the [ScienceLab](#)
