Description :

Measuring Tape (Product Code: SCL-310/053) is a 10 m steel tape used to measure lengthsand distances in physics laboratories, workshops and field activities. Beyond the lab it suits contractors, builders, electricians, architects, engineers and surveyors, and an ABS housing protects the steel blade. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as part of the measuring tools it offers with its physics lab equipment for schools in India.

Specifications

Parameter	Detail
Blade	Steel measuring tape
Housing	ABS
Length	10 metres
Accuracy	±0.2 mm
Typical users	Contractors, builders, electricians, carpet fitters, architects, engineers, surveyors and DIY users
Product code	SCL-310/053
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Measuring Tape Used For?

A 10 m tape covers distances that a metre scale cannot. In school physics it is used to mark out a track for speed and acceleration activities, measure the height of a staircase or the length of a corridor, and set the stretch of a long spring or string before a demonstration.

Pull the blade out straight, keep it taut and read at eye level; check that the end hook sits squarely on the start point. Let the tape retract slowly by hand instead of letting it snap back, and wipe the steel blade dry after outdoor use to keep the markings clear.

Supplier

ScienceLab, the trading name of Jain Scientific Equipments Private Limited in Ambala, supplies this steel measuring tape for school labs, colleges and institutions that need longer measurements than bench scales allow. It can be added to an order for physics apparatus so that a lab receives its measuring tools together. See the ScienceLab company profile for more.

Related Physics Lab Equipment

Other measuring tools that complement the 10 m tape:

- Meter Scale 100 cm — bench measurements up to one metre
- Meter Scale 50 cm — shorter lengths on the bench
