Description :

Wooden Block (Product Code: SCL-318/057) is a plain, square brown wooden block, 2 cm high, used as the sliding body in friction experiments and as a support or spacer on the physics lab bench. Schools buy it in class quantities for friction and inclined-plane practicals. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India, alongside its other mechanics lab equipment.

Specifications

Parameter	Detail
Material	Wood
Shape	Square
Height	2 cm
Pattern	Plain
Colour	Brown
Application	Laboratory use
Product code	SCL-318/057
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Wooden Block Used For?

In friction practicals the block rests on a horizontal surface or an inclined plane and is pulled with a spring balance, or by weights hung over a pulley, until it just begins to move. Loading it with slotted masses shows how friction changes with the normal force, and its flat square faces give a steady contact area while its 2 cm height keeps it low and stable.

The block also serves as a spacer under one end of a board or track, a stop at the foot of a ramp, or a rest that raises small apparatus. Keep its faces clean and dry and use the same face when comparing surfaces, so that each trial compares materials rather than dust.

OEM Manufacturer

Jain Scientific Equipments Private Limited, trading as ScienceLab, is the OEM of this wooden block and makes it at its own licensed factory at Saha, Ambala, Haryana, India. Buying from the manufacturer lets a school or dealer order blocks in class quantities with its friction and inclined-plane apparatus, and repeat orders are handled by the same maker; ask us about quantities. See the ScienceLab company profile.
