Description :

Intended for babies and young children, this electronic scale weighs up to 20 kg with 5 g sensitivity and shows the result on a 60 x 40 mm LCD. A height tape meter and a washable sheet come with it, so weight and length or height can be taken at one visit. An auto-off function saves battery.

Children's electronic scale specifications

Parameter	Detail
Type	Electronic baby scale, handy design
Capacity	20 kg
Sensitivity	5 g
Display	LCD, 60 x 40 mm
Supplied with	Height tape meter and washable sheet
Power saving	Auto-off function to save battery
Product code	SCL248 /040
Minimum order	10 units
Dispatch	Usually within 7 to 10 working days
Supplied by	ScienceLab (Jain Scientific Equipments Pvt Ltd), Ambala, India

Clinic tasks with the children's scale and height tape

Growth-monitoring visit. Spread the washable sheet, place the undressed baby in the centre and read the weight once the figure settles. Measure length with the height tape or, where a rigid board is preferred, on the child length-height board. Plot both results on the growth chart against the child's exact age.

Pre-session check with known masses. Before the first child, place a brass mass set on the scale and confirm that the display shows the marked value, then repeat with a heavier combined load. Write the result in the equipment log so that any drift is noticed early.

Nutrition screening corner. Alongside weight and length, health workers take arm circumference with a child MUAC tape and write all three figures on the child's card before the family leaves.
