## Description :

**Drying Rack** (Product Code: SLE/CH/55) is a peg board in ABS plastic with 18 pegs on which washed flasks, beakers and test tubes are hung upside down to drain and air-dry. Two holes are provided so the rack can be fixed to the wall above a sink, keeping wet glassware off the bench and letting water run straight away. School labs, college practical rooms and routine testing labs use it at their wash-up stations. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as part of its chemistry lab equipment in India and for overseas buyers.

### Specifications

| Parameter | Detail |
|---|---|
| Material | ABS plastic |
| Pegs | 18 |
| Suitable for | Drying flasks, beakers and test tubes |
| Mounting | Two holes for wall mounting |

### Typical Use

After a practical, glassware is scrubbed, rinsed with tap water and given a final rinse with distilled water. Hanging each item neck-down on a peg lets the last of the water drain out and air circulate inside, so borosilicate laboratory glassware is dry and free of drip marks by the next lesson. Heavier items such as conical flasks are best placed on the lower pegs and light test tubes higher up, so that drips do not fall onto glass that is already dry.

Mount the rack on a wall above the sink or draining board, using screws suited to your wall through the two holes, and check that it is level. ABS is easy to wipe down, so clean the pegs occasionally to stop residue transferring to freshly washed glass. Do not hang glassware that is still hot from an oven or flame on the plastic pegs.

### Manufacturer

Jain Scientific Equipments Private Limited, known by its trading name ScienceLab, is based in Ambala, Haryana, and makes laboratory fittings and teaching apparatus for institutions in India and international markets. The company profile has more information.

### Related Chemistry Lab Equipment

Products that go with this rack at the wash-up station:

- Conical Flask — one of the most common items hung on the pegs to dry.
- Test Tube — small tubes that dry quickly on the upper pegs.
- Brush Test Tube — for scrubbing tubes before they go on the rack.
- Wash Bottle LDPE with Narrow Mouth — for the final distilled-water rinse before drying.
- Drying Rack Glass & Plastic Ware — a larger coated-wire rack if you need more capacity.
