Description :

Burette Clamps Light Weight (Product Code: SLE/CH/65) are aluminium burette clamps that combine a light body with the mechanical strength needed for daily titration classes. Rubber-covered, spring-action jaws give a positive grip and quick release, and a single thumb screw fixes the clamp to a rod of nominal 13 mm diameter. Made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, they suit student benches where a light burette stand in an India lab is moved and reset often, and are also supplied to international markets.

Specifications

Parameter	Detail
Body	Light-weight aluminium, mechanically strong
Jaws	Rubber covered, with spring action for a positive grip
Finish	Smooth enamel finish with rubber finger grippers
Fixing	Single thumb screw, for a rod of nominal 13 mm dia.
Holds	One or two burettes
Operation	Positive grip and release
Versions	Burette Clamp Single; Burette Clamp Double

Typical Use

In a busy volumetric analysis class the clamp is opened and closed dozens of times a session as burettes are filled, read and rinsed. The spring-action jaws open with a squeeze of the rubber finger grippers and close again on their own, so students can change a burette with one hand while the other steadies the glass. The rubber covering protects the burette's outer surface and graduations from metal contact.

Being aluminium, the clamp adds little weight at the top of a stand, which keeps lighter student stands stable when a full burette is fitted. It is a good match for teaching labs putting together a volumetric analysis kit for India schools and colleges, where the double version lets two burettes share one rod — for example one titrant and one blank.

Manufacturer

Jain Scientific Equipments Private Limited, trading as ScienceLab, is based in Ambala, Haryana and makes laboratory hardware and educational apparatus. It is registered as an MSME manufacturing enterprise (Udyam UDYAM-HR-01-0003714), and export consignments are shipped under Importer-Exporter Code AAECJ8618A issued by DGFT.
