Description :

Bench Timer (Product Code: SLE/ME/39) is a bench-top digital timer used to time practical work, reactions and demonstrations in school science laboratories. It counts up to 9 hours, 59 minutes and 59 seconds with lap and split timing, and its colour-coded buttons and clear LCD display sit in a robust ABS casing that stands up to everyday student use. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, complete with operating instructions and batteries.

Specifications

Parameter	Detail
Type	Bench-top count-up timer, particularly suited to schools
Timing period	Up to 9 hours, 59 minutes and 59 seconds
Timing functions	Count up, lap timing and split timing
Display	Clear LCD
LCD dimensions	63.7 x 19.7 mm
Controls	Colour-coded buttons
Casing	Robust ABS
Overall dimensions	100 x 90 x 70.5 mm
Supplied with	Full operating instructions and batteries
Product code	SLE/ME/39
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Bench Timer Used For?

A bench timer stands where the whole group can see it, which makes it practical for any experiment that runs for a set time or needs elapsed time recorded: rate-of-reaction work such as the disappearing-cross test, cooling curves, dissolving and diffusion practicals, and timed observations of yeast or germinating seeds. Lap timing records successive intervals without stopping the count, while split timing holds an intermediate reading on screen as the timer keeps running.

The long timing period also covers extended runs such as drying, evaporation or crystal-growth checks spread across a school day. Colour-coded buttons help younger students start, stop and reset without confusion, and keeping spare batteries in the prep room avoids a timing being lost halfway through a lesson. It sits as comfortably among physics lab equipment for schools in India as it does on chemistry and biology benches.
