Parameter	Detail
Palm	Chrome split leather
Back	Cotton fabric
Wrist	Knit wrist
Size	One size
Pack	Pack of 12
Product code	SLE/G/11
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Chrome Leather Glove Used For?

A chrome leather glove is the standard hand cover for carrying timber, metal stock, bricks and test blocks, handling rough castings in a fitting or foundry shop, and shifting crates of equipment in a store. The split leather palm takes the rubbing and scuffing that would quickly wear through a plain fabric glove.

The cotton back keeps the glove lighter than an all-leather design, and the knit wrist helps it stay in place while you work. Leather is not meant for wet or chemical handling, and welding calls for a longer welding glove, so keep this one for dry, abrasive tasks and let it air-dry if it gets damp.

Supplier

Workshop gloves such as this one belong to the safety range that Jain Scientific Equipments Private Limited supplies under its ScienceLab trading name from Ambala, Haryana. Technical colleges, industrial training institutes and polytechnics often add a few packs to their equipment orders, and dealers order larger quantities for resale in India and international markets. Visit the ScienceLab company profile for background on the company.
