Description :

Acid Proof Aprons, Lab Coat, Pants, Shoe Covers and Sleeves (Product Code: SLE/SLC/01) is a range of PVC protective clothing used to shield the body and everyday clothes from acid and alkali splashes in chemistry labs, chemical stores and process areas. Besides aprons, lab coats, pants, shoe covers and sleeves, the same PVC splash clothing is available as a boiler suit, hood and leggings, so a full outfit can be put together for each task. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a lab coat supplier in India.

Key Details

Parameter	Detail
Material	PVC
Protection	Acid and alkali splash protection
Forms available	Apron, boiler suit, coat, pant, hood, legging, sleeves and shoe covers
Product code	SLE/SLC/01
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is Acid Proof PVC Protective Clothing Used For?

PVC splash clothing is worn wherever acids or alkalis are poured, diluted, transferred or cleaned up, such as preparing reagents in a school prep room, handling bulk acids in a chemical store, or dealing with spills. An apron with sleeves covers the front of the body and the arms during bench work, while a boiler suit or coat with pants, hood, leggings and shoe covers suits tasks where splashes can come from any direction. In school labs a lab apron and sleeves are often enough for students, while staff handling concentrated stock may need the fuller outfit.

PVC clothing is a splash barrier, not a substitute for safe practice: add acid to water, work behind a screen where one is available, and pair the garments with suitable gloves and eye or face protection. Check the chemicals you handle against the garment's suitability before use, and ask us if you are unsure. After use, rinse contaminated garments with plenty of water while still wearing gloves, hang them to dry away from heat, and discard any item that is cracked, stiff or torn.

What to Specify When Ordering

- Garment forms — apron, boiler suit, coat, pant, hood, legging, sleeves or shoe covers, with the quantity of each.
- Sizes — state the wearer sizes you need so availability can be confirmed.
- Chemicals handled — list the acids or alkalis and their strength so suitability can be discussed.
- Other protective items — add gloves and other safety wear from the related list.
