Description :

Odontopathies Model (Product Code: SLE/A/44) is a life-size collection of 25 diseased teeth mounted on a green base under a removable transparent cover. Together they showperiodontitis, necrosis and varying degrees of dental caries and dental pulp inflammation, sostudents can compare early and advanced disease side by side on real-size teeth. Dentalhygiene schools, dental and nursing colleges and school health-education programmes use it,and it is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, ananatomical models manufacturer.

Specifications

Parameter	Detail
Type	Dental pathology display model
Scale	Life size
Size	26 × 32 × 4 cm
Contents	25 diseased teeth
Diseases depicted	Periodontitis, necrosis, and varying degrees of dental caries and dental pulp inflammation
Mounting	Green base with removable transparent cover

Typical Use

Because the teeth are life size, learners see disease exactly as it appears in a patient’s mouth rather than on an enlarged model. A tutor can arrange a lesson around the progression of decay: from shallow caries through deeper lesions that reach the pulp and cause inflammation, on to necrosis, and then contrast these with periodontitis, where the supporting tissues rather than the tooth itself are affected. The transparent cover keeps the set dust-free on display and lifts off when students need a closer look.

Dental hygiene and assistant courses use the set for identification practice, asking trainees to classify each tooth by condition. In schools it fits oral health education, where showing real-size decayed teeth is often more persuasive than a chart. Replace the cover after every session so the small teeth stay clean and in position.

Manufacturer

This dental model comes from **Jain Scientific Equipments Private Limited**, an Ambala, Haryana manufacturer that sells under the **ScienceLab** name to dental, medical and general education buyers in India and international markets. To learn about the company, visit our company profile.
