Description :

Disarticulated Human Skeleton (Product Code: SLE/A/45) is a life-size human skeleton modelin 53 durable plastic pieces used for hands-on bone identification in anatomy, nursing and biology practicals. One hand and foot are wired, the other pair is loosely strung on nylon filament, and the vertebral column is strung on nylon filament, with a black plastic storage case included. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Type	Disarticulated full human skeleton
Scale	Life-size
Number of pieces	53
Material	Durable plastic
Hands and feet	One hand and one foot articulated on wire; the other pair loosely articulated on nylon filament
Vertebral column	Strung on nylon filament
Storage	Black plastic storage case included
Product code	SLE/A/45
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Disarticulated Human Skeleton Used For?

The mixed articulation is what sets this set apart in the lab. The wired hand and foot keep their natural shape, so they serve as a reference for how the small bones fit together, while the loosely strung pair can be spread out to examine the individual carpals, metatarsals and phalanges without losing any of them. The strung vertebral column can be laid out in order or curved to show the natural spinal curves, and the separate long bones, skull and girdles are handled one by one for side-identification and landmark exercises.

With a fixed count of 53 pieces to check in and out, a tutor can quickly confirm the set is complete at the end of a practical, and the storage case keeps everything together between classes or when the skeleton travels to another campus. For departments comparing a disarticulated human skeleton model with a fully loose set, this format trades some individual handling for much easier management.
