Product Name :

Human Hand

Product Code :

SLE/A/57

Description :

Human Hand (Product Code: SLE/A/57) is a life-size replica of the bones of the human hand, articulated with wire so the fingers keep a slight flexibility. Weighing only 0.1 kg, it can sit on a desk, be held in one palm and compared directly with the student's own hand, which makes bone names and joint positions far easier to remember. It is a compact choice for osteology practicals, physiotherapy and occupational-therapy courses and school biology, made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, one of the high school biology lab equipment manufacturers serving Indian institutions.

Specifications

Parameter	Detail
Type	Replica of the bones of the human hand
Scale	Life size
Articulation	Articulated with wire
Movement	Slight flexibility through the fingers
Weight	0.1 kg

Typical Use

The hand contains many small bones in a compact space, and students often confuse the carpals of the wrist. A life-size replica solves this by letting each learner lay the model beside their own hand and match bone to finger and knuckle. Tutors typically work from the wrist outwards: carpals first, then the metacarpals of the palm, then the phalanges of each finger and the thumb.

The slight flexibility in the fingers is enough to show how the joints bend without risking the wire articulation. Occupational-therapy and physiotherapy students use the model when discussing grip, fractures and hand rehabilitation, and several can be ordered so that small groups each have one on the bench. Store it flat or in a box so the fingers are not bent under other equipment.

Manufacturer

The model is produced by **Jain Scientific Equipments Private Limited**, the Ambala, Haryana company behind the **ScienceLab** brand. It is a registered MSME enterprise (Udyam UDYAM-HR-01-0003714), and its export orders are shipped under Importer-Exporter Code AAECJ8618A issued by the DGFT, supporting customers in India and international markets. More is available on our company profile.

Related Human Models
