Product Name :

Plastic Funnel

Product Code :

SLE/GF/02

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Plastic Funnel (Product Code: SLE/GF/02) is a lightweight, chemical-resistant conical funnel for pouring and filtering at the bench, offered in 35 mm, 65 mm and 100 mm diameters. Beingplastic, it is far less likely to break than glass, so primary and middle-school science teachers, lab assistants and technicians use it for everyday liquid transfers and simple filtration activities. It is part of the lab plasticware manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Material	Plastic
Shape	Conical
Diameters	35 mm, 65 mm, 100 mm
Resistance	Chemical resistant
Capacity (as described)	Two ounces
Stem (as described)	30 mm stem with a 3 mm diameter opening
Recommended filter paper	11 cm; when folded it fits inside the funnel without overhang

Typical Use

Younger students use the funnel to pour water or solutions into bottles, test tubes and measuring cylinders in school practicals, and to filter muddy water or separate sand from salt solution with a folded filter paper. Technicians keep one beside each reagent stock for topping up dropping and wash bottles, where a narrow stem and a steady pour prevent spills on the bench.

Pick the 35 mm funnel for filling small bottles and tubes, 65 mm for general bench transfers and 100 mm when larger volumes are poured. Because heat resistance is not listed for this plastic funnel, use a borosilicate glass funnel for hot liquids. Rinse it after each use so residues do not carry over between reagents.

Manufacturer

Made by **Jain Scientific Equipments Private Limited**, which operates as **ScienceLab** from Ambala in Haryana and serves schools, colleges and laboratories in India and international markets. Read our company profile for more about the business.
