Description :

Shoulder Girdle with Musculature Model (Product Code: SLE/A/109) is a one-piece, about life-size model that gives a 360° view of the muscular and bony elements of the human shoulder girdle and upper arm. Rod-mounted on a durable polymer base and supplied with a numbered key, it is a practical piece of educational lab equipment in India's physiotherapy, sports-science, nursing and medical colleges. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Muscular model of the shoulder girdle and upper arm
Scale	About life size
Size (without base)	17 × 21 × 10 cm
Construction	One-piece model
Mounting	Rod-mounted on durable polymer base
View	360° view of muscular and bony elements
Key	Numbered key included

Typical Use

The shoulder is the most mobile joint in the body, and that mobility depends on muscles as much as bones. Mounted on a rod above its base, this model can be studied from the front, back and sides, so students can see how muscles wrap over and around the shoulder girdle and continue down the upper arm. Using the numbered key, they can identify each muscle and bone and then discuss which muscles lift, rotate and stabilise the arm.

Physiotherapy and sports-science tutors use it when explaining common shoulder injuries and rehabilitation exercises, while nursing and medical students use it for upper-limb anatomy practicals and injection-site orientation. Because it is a single piece with no removable parts, it withstands frequent handling in busy practical classes, a useful quality in shared biology lab equipment. Place it in the centre of a group table so everyone gets a different viewing angle.

Manufacturer

Ambala-based **Jain Scientific Equipments Private Limited** manufactures this shoulder model and markets it, like the rest of its range, as **ScienceLab**. The company is registered in Haryana and supplies educational institutions in India and international markets. For more about who we are, see the company profile.
