Product Name :

Neuron Model

Product Code :

SLE/A/147

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

The **Neuron Model** (Product Code: SLE/A/147) enlarges a typical myelinated nerve cell about 2,500 times, from the dendrites and cell body to the axon wrapped in its myelin sheath, andshows the organelles inside the cell body. Part of the myelin can be removed to reveal the interiorof the axon. Biology teachers, physiology lecturers and psychology departments use it as cellbiology equipment in India and elsewhere, and it is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Magnification	About 2,500× life size
Size	53 × 38 × 17 cm
Base	Mounted on a durable polymer base
Cell body	Nucleus and nucleolus, Golgi complex, mitochondria and endoplasmic reticulum
Processes	Dendrites and axon
Myelin sheath	With nodes of Ranvier and Schwann cells; a portion can be removed to view the interior of the axon
Key	Numbered key included

Typical Use

The model is ideal for explaining how structure supports function in nerve cells: dendrites receive signals, the cell body with its nucleus, Golgi complex, mitochondria and endoplasmic reticulum keeps the cell supplied, and the axon carries impulses away. Lifting off part of the myelin sheath shows what lies underneath, while the nodes of Ranvier and Schwann cells set up a clear explanation of why myelinated fibres conduct faster.

Teachers often use it straight after an animal cell model lesson, so students can spot familiar organelles in a specialised cell. The numbered key supports labelling worksheets, practical exams and self-study, from senior secondary biology to undergraduate neuroscience.

Manufacturer

Jain Scientific Equipments Private Limited, trading as **ScienceLab**, builds this neuron model and runs its business from Ambala in Haryana, India. The company profile explains more about who we are.
